EARTH MOVING

Performance - Integrity - Commitment

BRIEF OVERVIEW

Du Plessis Sand started business in 1979 with a single truck. The company developed into a large fleet consisting mainly of tipper vehicles, flat deck trailers, trailers for medium-sized abnormal loads and also earthmoving equipment.

We are a Sand & stone supplier to local construction sector, as well as general transport of a variety of commodities throughout South Africa and into neighbouring SADC countries. All our vehicles are registered to transport dangerous goods and we are registered with SARS as an importer and exporter, as well as bonded cargo.

Based near Sasolburg in the Free State. The company has been a reputable supplier of sand, stone and other aggregates for almost 40 years. What sets us apart from our competitors is the fact that we source only the best quality material and all our loads are weighed and supplied with a weighbridge slip, so that you can assure yourself of the fact that you receive what you paid for.

CORE BUSINESS

Du Plessis Sand transports a wide variety of commodities such as coal, fertiliser, cullet, chrome, steel shavings, etc. The main focus is bulk tippers, flat deck trailers and earth-moving equipment.

As part of our logistic services, dedicated equipment is made available to customers for exclusive use on particular contracts, for example: vehicles working on a shift basis for certain products, or bulk tipper for the transport of scrap steel on a dedicated route to fulfil contract obligations.

Du Plessis Sand further provides an excellent logistic service whereby transport broking as well as commodity broking is available to further assist clients with the existing transport service.

MISSION STATEMENT

OUR MISSION

As a reputable enterprise, we aim to be the preferred supplier of logistic services through market related rates, backed by efficient transport and commodity broking.

OUR VISION

To be a reputable supplier of logistic services enhanced by competitive rates and governed by ethical business practise.

OUR VALUES

- Performance
- Integrity
- Commitment

Our promise - As a result of our exceptional experience in the transport industry, we undertake to fulfil our obligation towards our customers according to contract specifications.

MANAGEMENT TEAM

Du Plessis Sand is managed by an experienced team of knowledgeable individuals in the transport and related services field.

The Company has been in operation for more than 30 years and continuously strives to improve strategies to ensure excellent service and customer satisfaction.

OUR SERVICE PROFILE

The fleet management team is backed by the latest technology to ensure optimal availability and the subsequent correct feedback regarding load status, this includes:

- Vehicle maintenance & Optimisation
- Vehicle telematics
- Driver management
- Health & Safety management

We believe that proper fleet management minimizes associated risk and therefore improves productivity and vehicle efficiency.

COMMODITY BROKING & LOGISTICS

This service offers the sourcing, collection and warehousing as well as subsequent distribution of commodities.

EARTHMOVING EQUIPMENT

Hiring out of industrial and construction equipment: TLB, Front-end loader, Bobcat, etc.

Du Plessis Sand also supply major construction companies with all aggregates and related materials. We have the infrastructure to assist with long distance pipelines in terms of bedding sand and equipment.

Fertiliser, Agricultural Lime, Gipsom

Aggregates, Coal, Chrome, Iron Ore

DU PLESSIS SAND

DRIVER SELECTION & TRAINING

The company follows a strict selection process in the appointment of drivers, which includes certain minimum qualifications and experience, testing, as well as background checks with references and possible offence history.

Upon selection, new drivers are accompanied by a Driver Trainer for the first few deliveries to ensure a solid grasp of loading and off-loading procedures.

Du Plessis Sand is currently the only transport company in the country which has its own TETA registered driver training facility on their premises. We are justifiably proud to have this in-house driver training facility where young individuals are recruited from local communities and over a period of three years they receive strict, industry specific, theoretical and practical training up to a NQF level 4.

One of the benefits of having an in-house training facility is that drivers start their careers trained to uniformed standards and they are familiar with procedures that are unique to our line of business. The fact that the facility is accredited by TETA means that every trainee also receives an official diploma of each NQF level which has been successfully completed.
